

# INNOVATION HUBS IN AFRICA: ASSEMBLERS OF TECHNOLOGY ENTREPRENEURS

---

Thesis submitted in partial fulfilment of the requirements for the degree of  
DPhil in Information, Communication and the Social Sciences at the  
Oxford Internet Institute, University of Oxford

**Nicolas Friederici**

Oxford Internet Institute, Green Templeton College

University of Oxford

Supervisors:

Mark Graham (Oxford Internet Institute)

Marc Ventresca (Saïd Business School)

October 2016, Trinity Term

99,185 Words

## ACKNOWLEDGMENTS

---

An empirical, fieldwork-based, and detail-oriented thesis like mine depends on contributions from hundreds of people. While I cannot do justice to all of them, I will try to mention all those individuals and collectives that played an important role in the process.

First and foremost, I owe thanks to my first supervisor, Mark Graham. He supported and enabled this research from day one—or actually, even before. Mark backed my application to the DPhil program at the Oxford Internet Institute and helped me secure a scholarship and funding for fieldwork. He has always been encouraging, responsive, and hands-on when needed, but he was never controlling or pushy. This balance made him, in my eyes, an ideal thesis supervisor. He alleviated my confusions through innumerable conversations, and wrote support letters and emails to pave my way through dozens of applications and submissions. As the master communicator that he is, Mark has particularly helped me understand how to frame and present my work. Finally, he helped me transition into a related postdoctoral position, allowing me to continue and extend my research rather seamlessly.

My second supervisor, Marc Ventresca, has played a much different but no less essential role. Time and again, Marc inspired me and opened my eyes to new literatures and new ways of thinking. Conversations with Marc are always mind-expanding and often mind-blowing, and this impact on my intellect goes far beyond what can be read in this thesis. Marc’s knowledge is vast, and like no one else, he is able to explain and contextualize the origins and evolution of theory. Marc taught me to cherish values and principles that surpass careerism and the “publish or perish” dogma, such as curiosity, love of knowledge for knowledge’s sake, and (what one might call) elegance of thought. He also facilitated a Stanford visit for me, which I am deeply grateful for.

Next, I want to acknowledge the 133 entrepreneurs, hub managers, and other entrepreneurship supporters who offered up their time for interviews and workshops in Kigali, Harare,

and Accra. I had never been to any of these cities, but each time, I was welcomed and offered unconditional (and free!) help and assistance. It was also humbling to hear such a rich set of entrepreneurial stories—brimming with aspiration, skill, grit, dedication, creativity, and curiosity. I am not one to lionize entrepreneurs, but it is also true that I have met many remarkable individuals, doing important and difficult work for their communities and nations. I feel very fortunate to have been witness to the processes of positive change that are underway in so many African cities, and to have engaged with many of the people driving this change.

Back in Oxford, the assessors of different versions and parts of the thesis have greatly shaped and improved the final product. Marc Ventresca and Vili Lehdonvirta were assessors for the transfer of status, helping me to broaden my perspective before fieldwork. At the confirmation stage, Vili and Tom Lawrence helped me back on the path to a coherent, doable, and sensible thesis (a path which I had very much lost at the time). Vili and Jeremy Howells served as assessors of the final thesis; their fair and constructive evaluation and critique allowed me to see some holes in my work, but also where it might be of particular merit and how to take it forward. I thank these scholars for spending the time to read and appreciate my work, and for their critical insight. Eric Meyer provided additional guidance through the assessment of the thesis, concerning both its substance and the administrative process.

I received informal mentoring and substantive feedback from a number of other scholars. I will mention Tuukka Toivonen first, as he embedded me into a research community on hubs (and similar organizations), and his suggestions also helped me arrive at many of the insights in chapter 5. Isis Hjorth has not only been a great friend throughout the doctorate, but also supported me directly as I grappled with qualitative methodology, coding, rigor, and the ethics of my thesis. I greatly valued also Janet Merkel's bright mind and her urban-sociological perspective, as well as the personal support I received from her. Tuukka, Chris Busch, and

Ulrike Rauer helped as friendly reviewers for an almost-final draft of the thesis. The Entrepreneurial Spaces and Collectivities (ESCies) and Research Forum Entrepreneurship Africa groups have been fantastic outlets to discuss work in progress with peers in an informal format (special thanks to Tim Weiss, Andrea Jimenez Cisneros, and Lidia Gryszkiewicz). My presentation and several conversations during my time at SCANCOR in Stanford also yielded great insights (special thanks to Sarah Soule, Michael Meyer, Sharique Hasan, Melissa Valentine, and Joel Samoff). Richard Cuthbertson, my adviser at Green Templeton College, was a fantastic counterpart for stimulating intellectual and scholarly conversations outside of any publishing and assessment pressures.

Chris Foster, Sanna Ojanperä, and Amir Anwar were wonderful colleagues on the Geonet project, which I contributed to part-time. Bernie Hogan, Taha Yasseri, Felix Reed-Tsochas, and Paolo Quattrone were great teachers in the two social network analysis classes that I took in Oxford, helping me to understand both possibilities and limitations of network theory and analysis. Several Oxford Internet Institute and Green Templeton College support staff made my life outside of thinking and writing very easy: Emily Shipway, Duncan Passey, Ornella Sciuto, Tim Davies, Nick Martin, and April Lopez deserve mentions.

Many peers living (and sometimes suffering) through their own DPhil and PhD experiences offered both emotional and professional support. Ben Zevenbergen stands out as a friend and adviser throughout my time in Oxford. Alexandra Ioan, Andrea Jimenez Cisneros, Nick Fahy, and Guillermo Casasnovas were terrific conversation partners to work through the trials and tribulations of a PhD and find solace.

More mundane but no less essential support came from the Clarendon Fund, which provided me with a full stipend during my three years in Oxford. The Skoll Centre for Social Entrepreneurship awarded a £12,000 grant to the project, which enabled me to go on extensive fieldwork and disseminate my findings widely. I am also grateful to Green Templeton College,

which supported me with almost £7,000 through the Templeton Education and Charity Trust, Competitive Conference or Fieldwork Funding, and Learning Grants; I used this sum for conference travel and my Stanford visit. An award from the Economic Geography Specialty Group of the American Association of Geographers provided additional motivation and a small injection of funds.

I presented at many conferences and workshops but a few stood out in terms of how much they helped me learn and improve my work. Topping the list are a 2016 workshop on social innovation in Cambridge (led by Helen Haugh) and the doctoral consortium of the 2015 West Coast Research Symposium on Technology Entrepreneurship (with fantastic mentors Joel Gehmann and Shon Hiatt). The 2015 Strategy, Entrepreneurship, and Innovation workshop at the London Business School and the 2014 Ingenio workshop in Valencia were also helpful. In Oxford, participants of the Internet Institute's DPhil Seminar and TMCD seminars provided great comments. Feedback from discussants and attendees of my presentations at the Annual Meeting of the American Association of Geographers and the Uddevalla Symposium in 2016 also helped a lot (Yas Motoyama, Harald Bathelt, and Andrew Johnston deserve particular mention).

Fortunately, I was also able to maintain rewarding relationships with practitioners. Toni Elias, Tim Kelly, Tamsin Jones, and Marissa Drouillard have been great colleagues and friends who helped me keep my research relevant and bridge the divide between academia and practice. Toni also involved me in a consultancy in the later stages of my dissertation, which gave me a badly needed boost of motivation, as I saw that I had indeed acquired skills and knowledge that can usefully be applied in real-world projects.

I'm also very happy that Soundcloud provided me with a never-ending stream of free electronic music. Without it, I'm not sure I could have maintained focus and concentration through grueling hours, weeks, and months of analysis and writing.

Finally, I must mention the personal and emotional strain that comes with writing a dissertation under time pressure, because I want to acknowledge the people who have shouldered this burden with me. Many friends who are not academics had to listen to my complaints, and it has been humbling to receive so much wonderful advice, grounding, and emotional support in return (from Fabian Karrasch in particular). Yet, no one was a greater source of comfort and strength than my wife, Elida, who listened patiently and spurred me on, but who also gave me a welcome resort away from the work whenever I needed it. To her and all the others who made small and large contributions to this dissertation, I extend the most heartfelt gratitude.

Thank you!
